

MAHAWER – Startup

I am **Fadl Morsi**, Co-founder of Mahawer. MAHAWER is an Egyptian manufacturer of Egyptian 3D printers and CNC machines. It is founded by **Fadl Morsy** and **Breksam Khaled** in early 2018. MAHAWER aims to empower the growing Egyptian manufacturing process brand fabrication community and raise the standards of machines made in Egypt.

From my first day at the faculty of Engineering, I realized that it is not difficult to attain success if you have an everyday inspiration that drives you to perform your goals. When I chosen Electrical Engineering, I was searching for creativity and design, self motivation, hands-on, ...

During my journey, I decided to have my own idea and my own business. When I heard about the **Career Development and Entrepreneurship Center (CDEC)** at my university, I was one of the first students who participated in career and entrepreneurship sessions. I remember one important statement I learnt how to **Develop success from failures**. I paid more attention to my idea to be concrete. I looked for an incubation opportunity. Finally, I got it from **ICEALEX**. Last month, I heard about PUA startup weekend. I am sure that ICEALEX together with the CDEC may help PUA entrepreneurs.
